

Table 3.

Type of Health Insurance Coverage for Working-Age Adults: 2013

(Data are based on the CPS ASEC sample of 68,000 addresses; see note at end of table. Numbers in thousands, confidence intervals [C.I.] in thousands or percentage points as appropriate. Population as of March of the following year. For information on confidentiality protection, sampling error, nonsampling error, and definitions, see <ftp://ftp2.census.gov/programs-surveys/cps/techdocs/cpsmar14.pdf>)

¹ A 90 percent confidence interval is a measure of an estimate's variability. The larger the confidence interval in relation to the size of the estimate, the less reliable the estimate. Confidence intervals shown in this table are based on standard errors calculated using replicate weights. For more information, see "Standard Errors and Their Use" at <ftp://ftp2.census.gov/library/publications/2014/demo/p60-249sa.pdf>.

² Private health insurance includes coverage provided through an employer or union, or coverage purchased directly by an individual from an insurance company.

³ Government health insurance coverage includes Medicaid, Medicare, TRICARE, CHAMPVA (Civilian Health and Medical Program of the Department of Veterans Affairs) and care provided by the Department of Veterans Affairs and the military.

⁴ Individuals are considered to be uninsured if they do not have health insurance coverage for the entire calendar year.

⁵ The combined category "married" includes three individual categories: "married, civilian spouse present," "married, Armed Forces spouse present," and "married, spouse absent."

⁶ The sum of those with and without a disability does not equal the total because disability status is not defined for individuals in the Armed Forces.

Note: The 2014 CPS ASEC included redesigned questions for income and health insurance coverage. All of the approximately 98,000 addresses were eligible to receive the redesigned set of health insurance coverage questions. The redesigned income questions were implemented to a subsample of these 98,000 addresses using a probability split panel design. Approximately 68,000 addresses were eligible to receive a set of income questions similar to those used in the 2013 CPS ASEC and the remaining 30,000 addresses were eligible to receive the redesigned income questions. The source of data for this table is the portion of the CPS ASEC sample which received the income questions consistent with the 2013 CPS ASEC, approximately 68,000 addresses.

The estimates by type of coverage are *not* mutually exclusive; people can be covered by more than one type of health insurance during the year.
